Product Description

Simple, float operated gauges suitable for both oil and diesel/fuel tanks.

These are for 4ft tanks and there is also an adjustable universal version available (Suitable for tanks up to 2M deep - the adjustment is made via a screw control on the side of the dial face cover).

These sorts of gauges do exactly as the name suggests and have a float that goes up and down with the oil level. The float is connected to the gauge that sits on the top of the tank with a string. The string is wound around the mechanism in the gauge that will turn the dial depending on the level of the oil.

Commonly known as a float on a rope gauge or cat and mouse gauge.

Please Note: some sizes come with a square body and others with a round body; the universal version measures in centimetres rather than showing the 'Full-3/4-1/2-1/4-Empty' markings of the fixed depth versions. We can supply a 'Combivent' fitting that fits over a 2" vent pipe and provides a 1-1/2" female thread that allow the gauge to simply screw into the top of this (making fitting extremely easy). 1-1/2" BSP Male Threaded for tank attachment.

UNIVERSAL 0-200CM FLOAT GAUGE
UNITS IN CM'S

Features

- Suitable for tanks up to 2m
- Connection size - 1 1/2" BSP
- Easy to use and install
- Choice of display type
- Combivent 2" BSP adapter available
