

## PRODUCT SPECIFICATION SHEET

Piusi Premium Manual AdBlue® IBC Pump Kit

**BRAND:**

**SUITABLE FOR:**

**FLOW RATE:**

**380ML**  
PER REVOLUTION

### Product Description

PIUSI Rotary Hand Pump is a stainless steel rotary hand pump with vanes for the transfer of AdBlue®, water and antifreeze.

Entirely developed, manufactured and certified in Italy, this manual pump for transferring AdBlue® (a liquid based on water and urea) is specifically designed for drum installations for all professional uses in industries such as automotive, workshops, agriculture and transport, among the main ones.

The PIUSI Rotary Hand Pump is characterized by an ergonomic and practical design. The construction materials of this manual transfer pump, namely stainless steel and technopolymers according to ISO 22241, guarantee 100% chemical compatibility with AdBlue® as well as maximum efficiency and durability. The Piusi Hand Pump's rotation lever is robust and durable; Piusi Hand Pump has a capacity of 38 litres per 100 revolutions.

The PIUSI Rotary Hand Pump is the simplest solution when you need to transfer AdBlue®. The suction hose is modular and adaptable to different lengths for fast, simple and immediate dispensing. The construction material of the priming and delivery hoses and the stainless steel spout allow safe operation without contamination of the fluid. The rotary hand pump for AdBlue® by PIUSI also consists of a drum connector in different threading standards to ensure maximum adaptability to all types of drum.

### Features

- Flow rate: 380 ml per revolution
- Sturdy connector
- IBC bracket included
- 2.5m delivery hose & 1m suction
- Adjustable suction pipe
- Manual rotary hand pump
